Visit [UDACITY Introduction to Generative AI with AWS Project Documentation Report](#) to make a copy of this document.

Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	1.Financial
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	The investment tests performed indicate > that the proposed algorithm is a good choice for the problem of interest. \end{abstract} \section{Introduction} The \emph{Bayesian} approach to decision-making under uncertainty is based on the concept of a \emph{probability distribution} over the set of possible out
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	The investment tests performed indicate > [{"generated_text": ' that the investment is worthwhile.\n\nThe investment tests performed indicate that the investment is not worthwhile.\n\nThe investment tests performed indicate that the investment is worthwhile, but the expected returns are not high enough to make the investment worthwhile.\n\nThe investment tests performed indicate that the'}]
